Production - Develop Build was mistakenly pushed to PROD instead of Master branch build

Enviornment: Production

The problem: The UAT staging build was pushed to Production accidently

The short term fix: Revert the build with new Master Branch build

The long term fix: Revert the build with new Master Branch build

Systemic Solution: The release engineer missed to make a Master Branch build and pushed the latest build to Production. The release document has been updated properly to reflect "Build and Push" Master Branch.

📄 Duplo - Sprint completion and Production release branching and tagging

Gatekeeper: **Dev/Release**

Doubt: N/A
