Duplo - Commit and Merge strategy for Develop & Sprint Branches

Below are the steps for every Developer to follow for the Hotfix and Commits in sprints.

- Hotfixes need to be merged back to Develop & Sprint Branches (**Downstream**)
  - Develop and Sprint branches should be ahead or in sync with Master
- For hotfixes related to CSV changes, the ID should be picked from the sprint branch
  - Changelog ID should also be picked from the sprint branch

- For PRs to merge, squash to Sprint branch so that we have single commit for each PR.
- GitHub actions to automate merges back to downstream branches – To be tried out AI @Aditi Jadon

- Merge from Sprint to Develop at the end of 2 sprints
  - For QA failed stories, needs to be pulled out (if it take smore than 2 days in the 2nd sprint) or Fix it
- Any Merge conflicts from Sprint to Develop
  - Get into a call and solve it
